

Mounting Method: Double Faced Tape Template: Pounce Pattern

Tools Required: Pounce Pattern, level, masking tape, tape measure, cleaning cloth, VHB tape, pounce bags with chalk in them. (you can use a sock with chalk in it.)

1. CLEAN Mounting Surface

Clean and prepare mounting surface before starting your install.

Tip: Surface should be flat, clean and free of excess dust or moisture

2. POSITION and Secure Guide

Layout, level and securely tape your Pounce Pattern **FLAT** to mounting surface. Double Check the pattern for spelling, kerning (spacing of letters), etc.

3. Choose one of the following methods to mark wall

A: Mark corners of letters

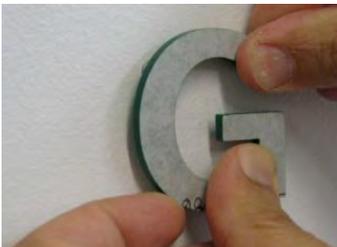

On the mounting template, cut the corners of the letters along the perforated line and mark with a pencil

B: Cut out letters

Cut out the entire letters along the perforated lines to use the template as a stencil or mark letter locations with pencil

C: Chalk method

Using a chalk bag, or chalk sock, dust the perforations on the template. This will transfer the chalk to the wall (make sure you apply enough so dots appear on the wall..)

5. POSITION & APPLY letters following the markings from the template.

Install each letter and logo, while using the chalk dots, pencil markings, or stencil template as your guide. Gently apply pressure to each letter to ensure the tape on the back is secured to wall. Perform a final check from a distance, to insure spacing, and straight lines.
